SERVING INDUSTRY WORLD WIDE

## OIL REMOVAL MEDIA

### Spaghetti” Filter material:

This material is made of polypropylene fibres. Because this material is positive loaded, it can absorb the oil and grease from the bath liquid. The spaghetti has an absorptivity of 12 times its own weight.

### Absorption characteristics:

This polypropylene material takes only the oil and grease from the bath liquid. All necessary components will remain untouched by this material. Advantages are:

- Longer chemical life-time
- No production stop due to premature changing of the bath
- No sludge transfer to the following bath
- No obstruction due to lipophilic substance on the resin in ionic exchangers.

### Areas to be used:

- Life-time extending of degreasing baths
- Alkaline cleaner, emulsified and partly de-emulsified
- Electrolyte degreasing
- Ultrasonic degreasing
- Combined degreasing and Phosphate baths
